

# Value Added Services

## Delivering Efficiencies in Supply Chain Management

As the technology industry continues to evolve at an ever increasing rate and product life cycles continue to get shorter, the need to improve supply chain efficiencies by minimizing time to market, improving order fill rates, aligning inventory forecasts to market demand, minimizing the risk of shortages or overages during product transitions, and lowering operation costs become increasingly critical elements of a competitive strategy.

As a computer components distributor with over 20 years of experience, ASI has been involved in a wide range of activities vital to companies interested in utilizing a value added services and logistic partner flexible enough to adapt to the changing needs of the market. Our nationwide network of distribution centers assists our customers to maintain right level of inventory close to their market for business to business or business to consumer shipments.

Additionally, our experience in managing a wide range of technology products on behalf of our suppliers combined with our value add service capabilities further differentiates ASI.
